

# Hotel Booking Project

The platform will offer a user-friendly interface for both guests and administrators, ensuring efficient management of bookings and hotel information.

## User Use-Cases:

### Search and Browse:

- Users can search for hotels based on location, dates, price range, and amenities.
- Browse through a list of hotels with detailed descriptions, images, and reviews.

### Booking Process:

- Select desired dates and room types.
- View real-time availability and pricing.
- Fill in the necessary data to make the reservation

### User Accounts:

- Users can create accounts to manage bookings and personal information.

### Reviews and Ratings:

- Users can leave reviews and ratings based on their stay experience.
- View reviews from other guests.

## Admin Use-Cases:

### Hotel Management:

- Add, edit, or remove hotel listings.
- Manage availability calendars.

### Booking Management:

- View and manage all incoming bookings, including pending, confirmed, and canceled reservations.
- Modify booking details, such as dates, room types, and guest information.

### User Management:

- Admins can manage user accounts, including registration, authentication, and account deletion.
- Access user data for analysis and customer relationship management.

## Features:

- Customers who spend a certain amount of money will be generated a voucher that they can use for their current vacation or future bookings.
